

How to Run the Job Portal System

Complete step-by-step local deployment guide from a fresh project folder to running in your browser.

Verified Environment & Software Stack

Java 17+ Target Compatibility

Java JDK

Java 25.0.2 LTS

(Source/Target: Java 17)

Build Tool

Apache Maven 3.9.x

(maven-war-plugin 3.4.0)

Database Server

MySQL 8.0+

(DB: job_portal_db)

Servlet Container

Apache Tomcat 11.x

(Port: 8080 / Jakarta EE)

1 MySQL Database Setup

Start MySQL service and execute schema from database/schema.sql:

```
-- Create Database & Tables (users, profiles, jobs, applications)
CREATE DATABASE IF NOT EXISTS job_portal_db; USE job_portal_db; --
Execute database/schema.sql to create all tables
```

2 Configure Database Credentials

Copy db.properties.example to src/main/resources/db.properties:

```
db.url=jdbc:mysql://localhost:3306/job_portal_db?
useSSL=false&serverTimezone=UTC db.user=root
db.password=YOUR_LOCAL_MYSQL_PASSWORD
db.driver=com.mysql.cj.jdbc.Driver
```

⚠️ Keep db.password local; never commit personal credentials to version control.

3 Build WAR & Deploy to Apache Tomcat

Package application WAR and copy to Tomcat webapps directory:

```
# 1. Build WAR package via Maven mvn clean package # Generates
target/JobPortal.war # 2. Deploy WAR into Tomcat webapps
directory copy targetJobPortal.war "%CATALINA_HOME%webapps"
```

4 Start Tomcat & Access Web Portal

```
# Start Apache Tomcat Server catalina.bat
start # Linux/Mac: ./catalina.sh start
```

Open in any web browser:

<http://localhost:8080/JobPortal/>

Live Landing Page (index.jsp)

HTTP 200 OK

Quick Troubleshooting Checklist

- **MySQL Service:** Verify MySQL server is active on port 3306.
- **Port 8080:** Ensure port 8080 is available for Tomcat.
- **Credentials:** Verify username/password in db.properties.
- **WAR Deployment:** Ensure JobPortal.war is in webapps/.
- **Logs:** Check %CATALINA_HOME%logscatalina.out for errors.

High-level architectural interaction model connecting Job Seekers, Recruiters, and Application Lifecycles.

Job Seeker — How the Website Works

Walkthrough of candidate features: account registration, profile setup, skill-based job searching, and application tracking.

Recruiter — How the Website Works

Complete employer walkthrough: posting job vacancies, managing active listings, reviewing candidate profiles, and updating statuses.

① Register Company → ② Recruiter Dashboard → ③ Post New Job Vacancy → ④ Manage Posted Jobs → ⑤ Review Applicants & Update Status

① Recruiter Dashboard

Applied for: Senior Java Backend Engineer (San Francisco, CA (Hybrid))

UNDER REVIEW

Inspect candidate skills, education, and experience with inline dropdowns to update application status.

Strict Recruiter Data Ownership & Security Boundaries

- **Own Job Isolation:** A recruiter can strictly view, edit, and delete *only jobs they posted*. Recruiter ID is securely retrieved from the server session (never accepted from client inputs).
- **Applicant Authorization:** Status updates (/recruiter/update-application-status) verify that the target application belongs to a job owned by the authenticated recruiter.

Session-Bound SQL Isolation

```
Recruiter (Session UserID)
├── Own Jobs (recruiter_id = ?)
└── Applicants & Status Updates
```

Application Lifecycle & Quick Reference

Detailed status lifecycle guide, role-based permission matrix, and confirmed URL directory.

Detailed Status Lifecycle Meaning

APPLIED

Initial default state created when the candidate clicks "Apply". Visible to recruiter immediately.

UNDER REVIEW

Recruiter is actively evaluating candidate's qualifications, skills, and background experience.

SHORTLISTED

Candidate successfully passed profile screening and is selected for interview / next round.

REJECTED

Application was reviewed and did not match the specific hiring criteria for this job opening.

Feature & Permission Matrix ("Who Does What?")

Platform Feature / Operation	Public Visitor	Job Seeker (Candidate)	Recruiter (Employer)
Register & Authenticate	✓	✓	✓
Maintain Personal / Company Profile	—	✓ Candidate Profile	✓ Company Profile
Skill-Based Job Search & Filter	—	✓ Full Search Access	—
Post & Publish Job Vacancies	—	—	✓ Create Postings
Manage Posted Jobs (Edit & Delete)	—	—	✓ Own Postings Only
Submit Job Application (1-Click)	—	✓ Apply with Profile	—
View Applications	—	✓ Own Submissions	✓ Applicants to Own Jobs
Update Application Status (Decision)	—	—	✓ Review & Shortlist/Reject

Quick Access — Confirmed URL & Route Directory

Context Path: /JobPortal

Public Endpoints
